Health in All Policies workshop: the case of air pollution, urban health, and sustainability
18-20 June 2018, Washington DC

Key concept – determinant causes

BMJ Global Health

Figure 1 Estimates of the contribution of the main drivers of health status.

Determinants and International Law

2000 General Comment, the right to health

- Article 12.2 (a): The right to maternal, child and reproductive health
- Article 12.2 (b): The right to healthy natural and workplace environments
- Article 12.2 (c): The right to prevention, treatment and control of diseases
- Article 12.2 (d): The right to health facilities, goods and services

Complexity

Cause and effect may be identifiable in retrospect but may be unlikely to conform with prior expectations on how things work. **Interventions must be flexible** as outcomes may be unforeseen.

-Snowden 2005

Overview

History of Intersectoral Action

Primary health care –tools 1970s-80s

Intersectoral action for health (IAH) sponsored by W.H.O

02/08/2018

Health in All Policies workshop: the case of air
pollution, urban health, and sustainability
18-20 June 2018, Washington DC

8

Multisectoral / intersectoral

Multisectoral action– 2016

- ..*"Encompasses all activities involving non health sectors that can potentially improve health."* [Rasanathan et al. 2017]

Intersectoral action– 2007/earlier (WHO)

- ..*"A recognised relationship between part or parts of different sectors to take action on issues to improve health and health equity"; [WHO International Conference on Intersectoral Action for Health 1997, p. 3]. The action cannot be undertaken without cooperation.*

Action across sectors- 2015

- ..*"Action across sectors refers to work undertaken by two or more government ministries or agencies to develop policies, programmes or projects. "*

Multisectoral / intersectoral

Whole-of-government

..approach refers to the coordinated efforts of two or more sectors within government to improve health outcomes. This can include working across different levels of government. Joined-up government and healthy public policies are similar terms used in the HiAP literature.

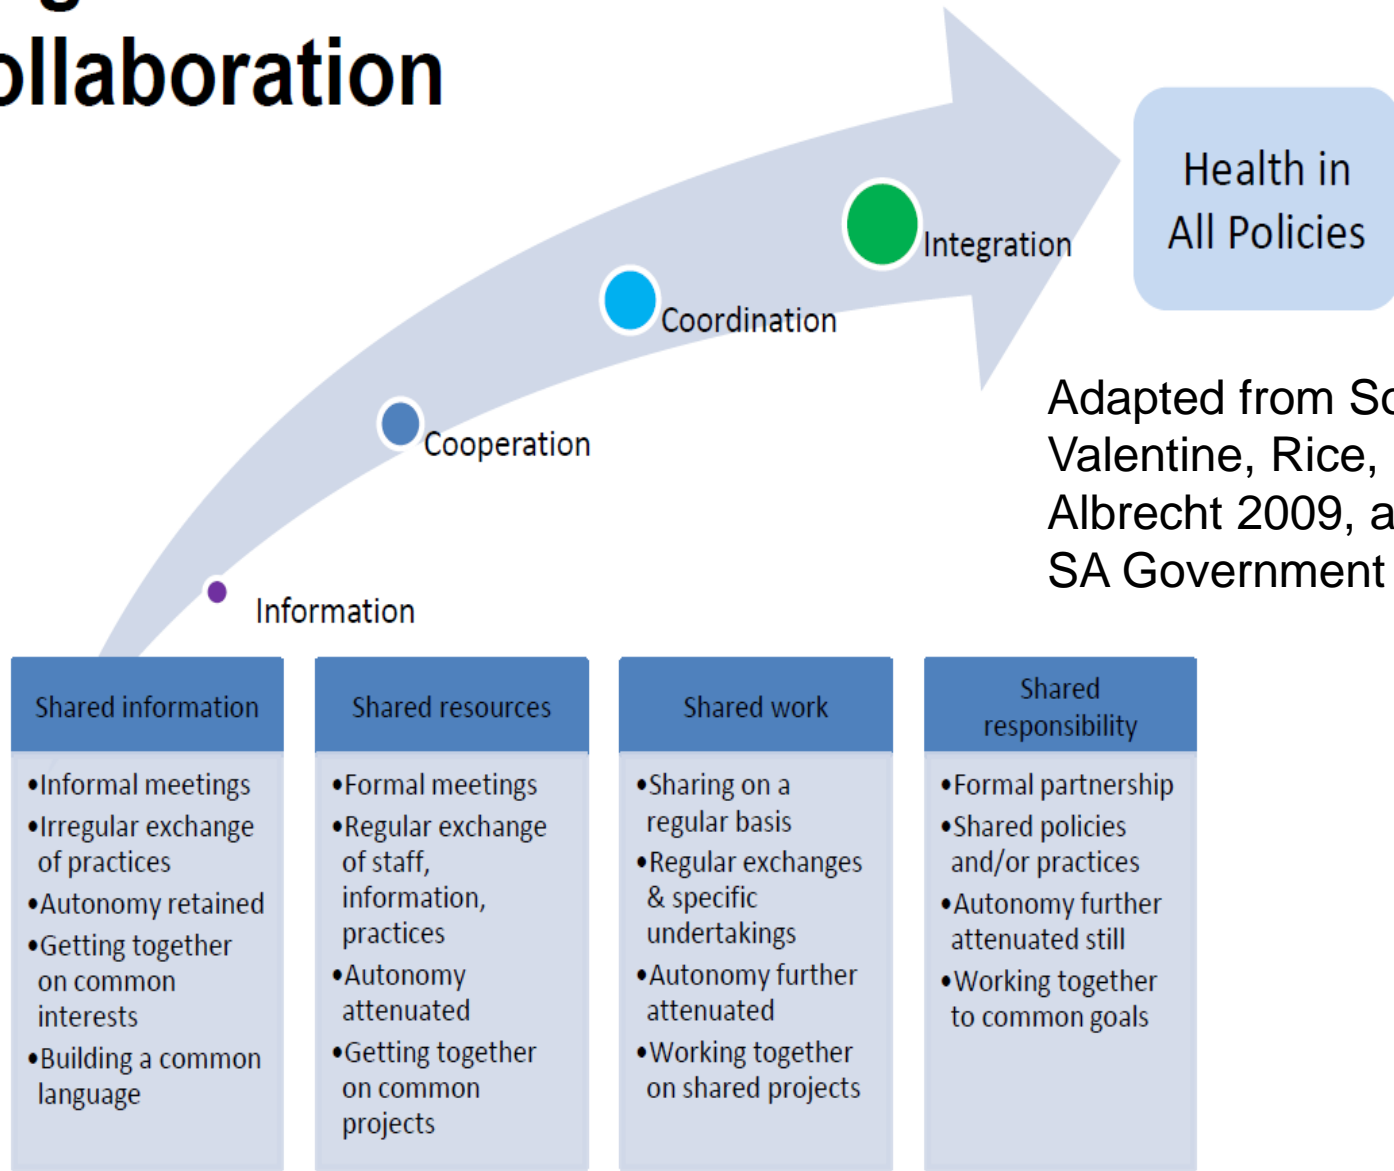

Whole-of-society

..approach refers to coordinated efforts to improve health by multiple stakeholders within and outside government that may also be from several sectors.

Degrees of multisectoral collaboration

Adapted from Solar, Valentine, Rice, Albrecht 2009, and SA Government

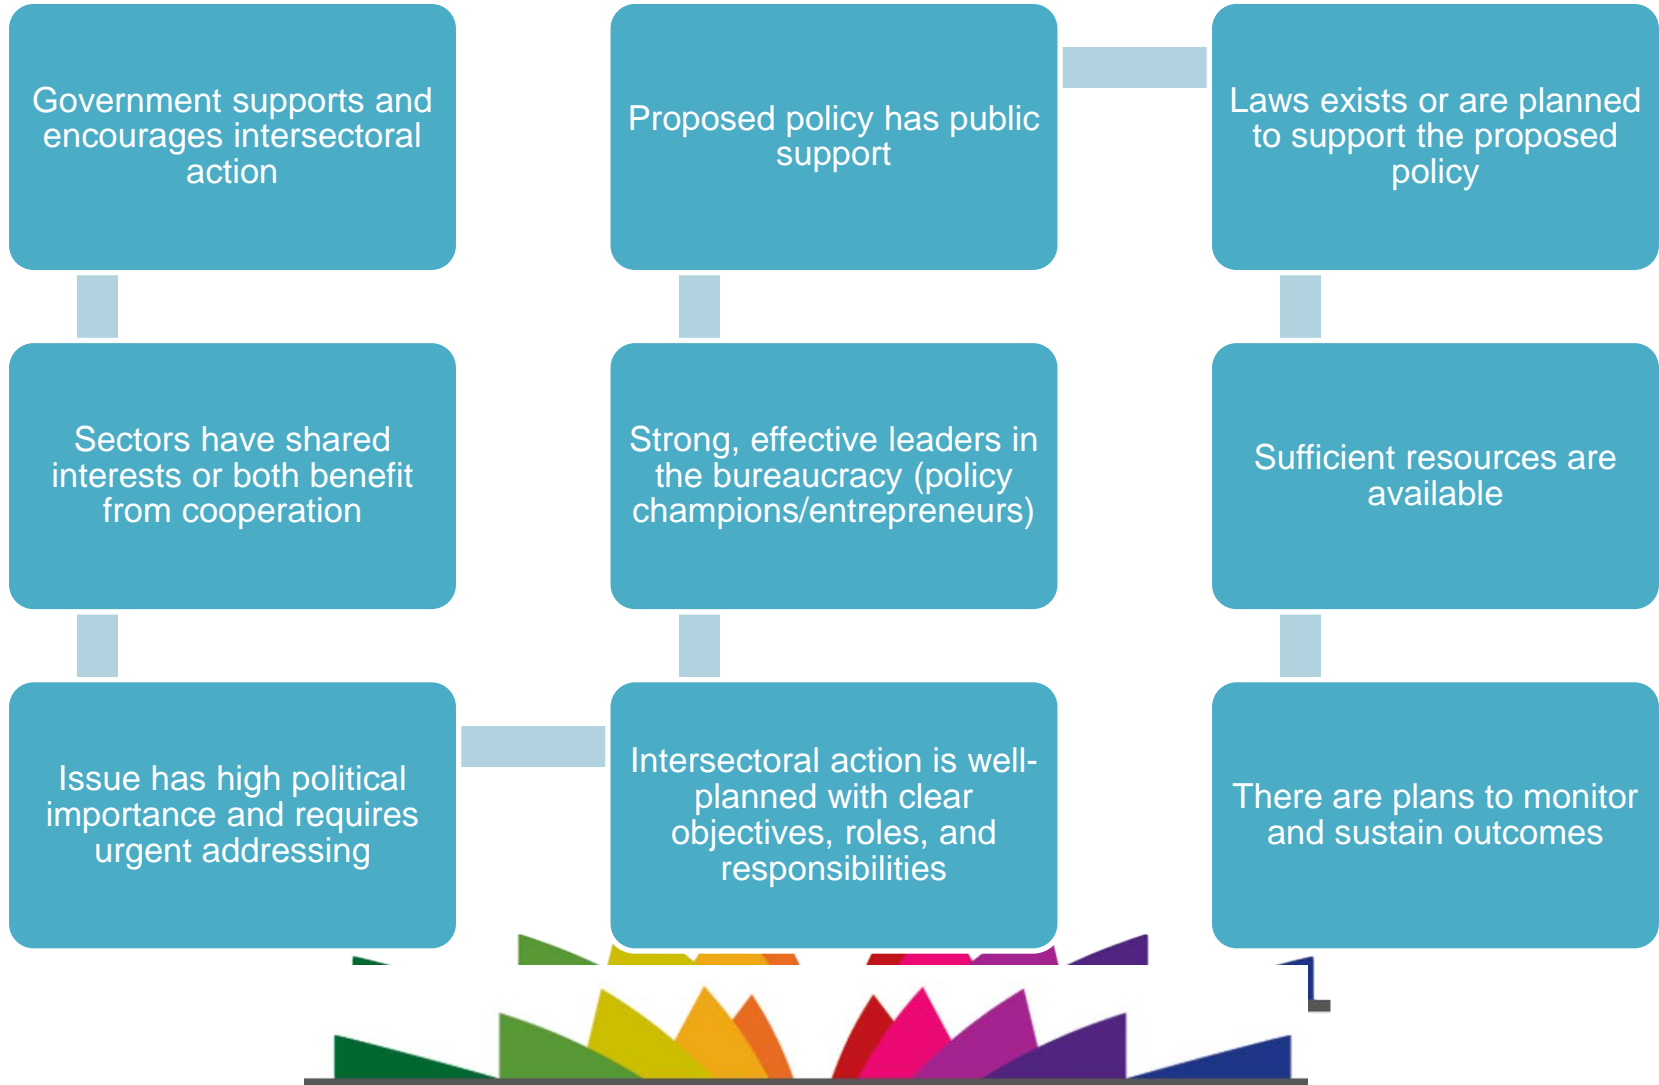

Intersectoral and integrated

- .. management of cross-cutting issues in public policy transcending the boundaries of established policy fields, or which often do not correspond to the institutional responsibilities of individual departments.
 - Horizontal
 - Vertical

Conditions that favour effective intersectoral collaboration

Overview

Sustainability and the resource envelopes

Development is sustainable when it “meets the needs of the present without compromising the ability of future generations to meet their own needs“

[The World Commission on Environment and Development 1987; Commission on the Measurement of Economic Performance and Social Progress / Joseph Stiglitz]

Sustainability and health

Policy coherence

Good health requires policies that actively support health 

It requires different sectors working together, for example:

TO ENSURE ALL PEOPLE HAVE EQUAL OPPORTUNITIES TO ACHIEVE THE HIGHEST LEVEL OF HEALTH

Air pollution, cities, health, equity

- Affordable and clean energy for all for healthy homes and lives

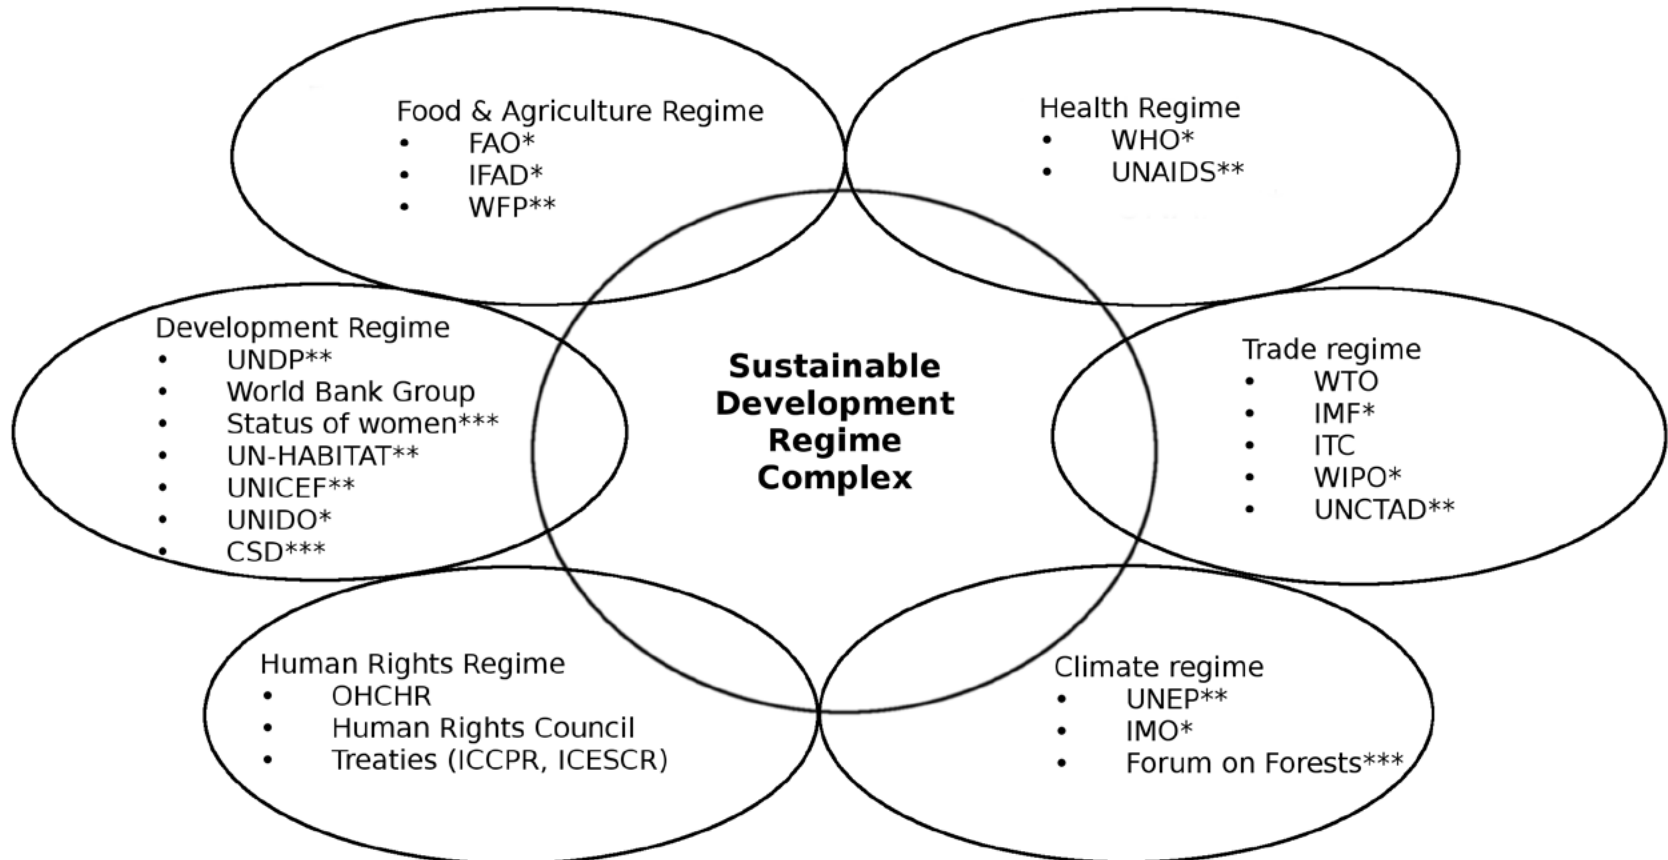

- **Sustainable cities and communities** with healthy urban planning, clean air, adequate housing and more active living

- **Reduced inequalities through involvement of citizens** in decisions on access to services and resources for health

Sustainable Development International Governance

Overview

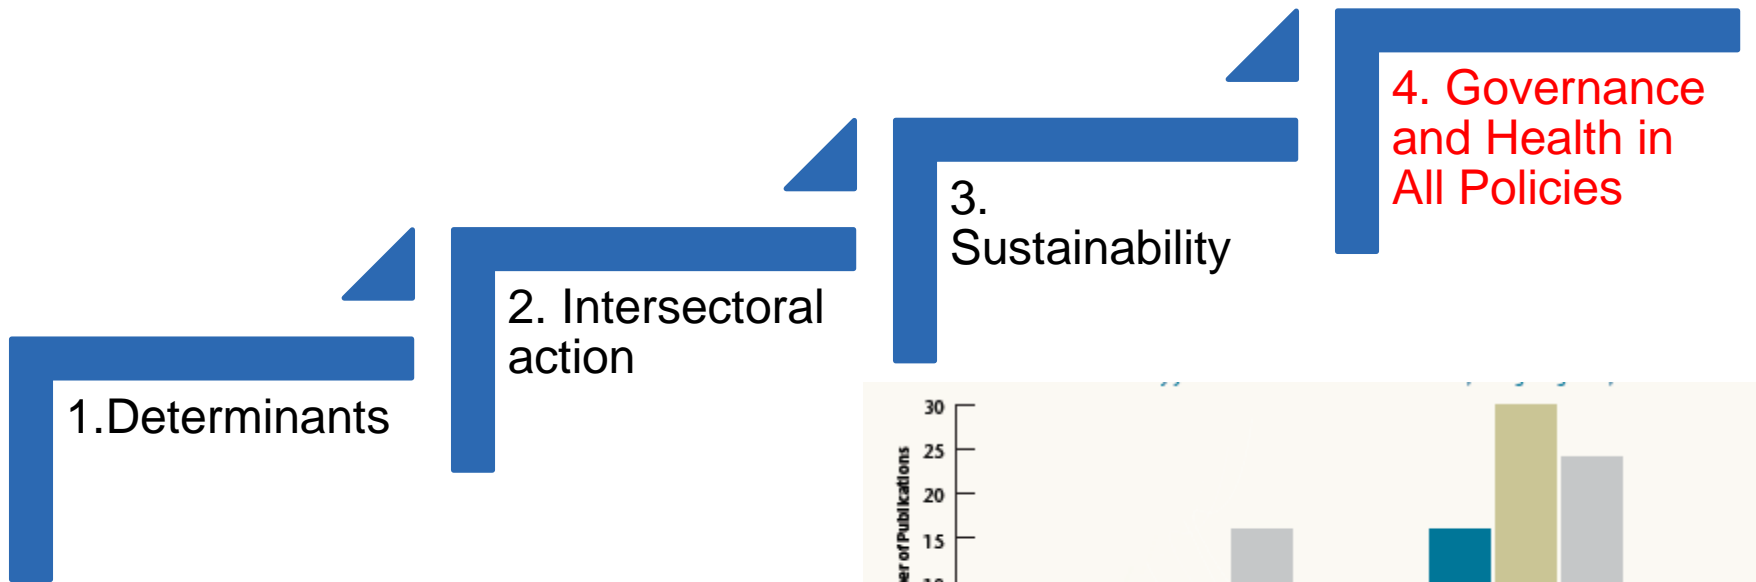

Figure 4.3: Stages of the policy cycle

Policy Cycle

Health Diplomacy

Negotiating for health in the face of other interests

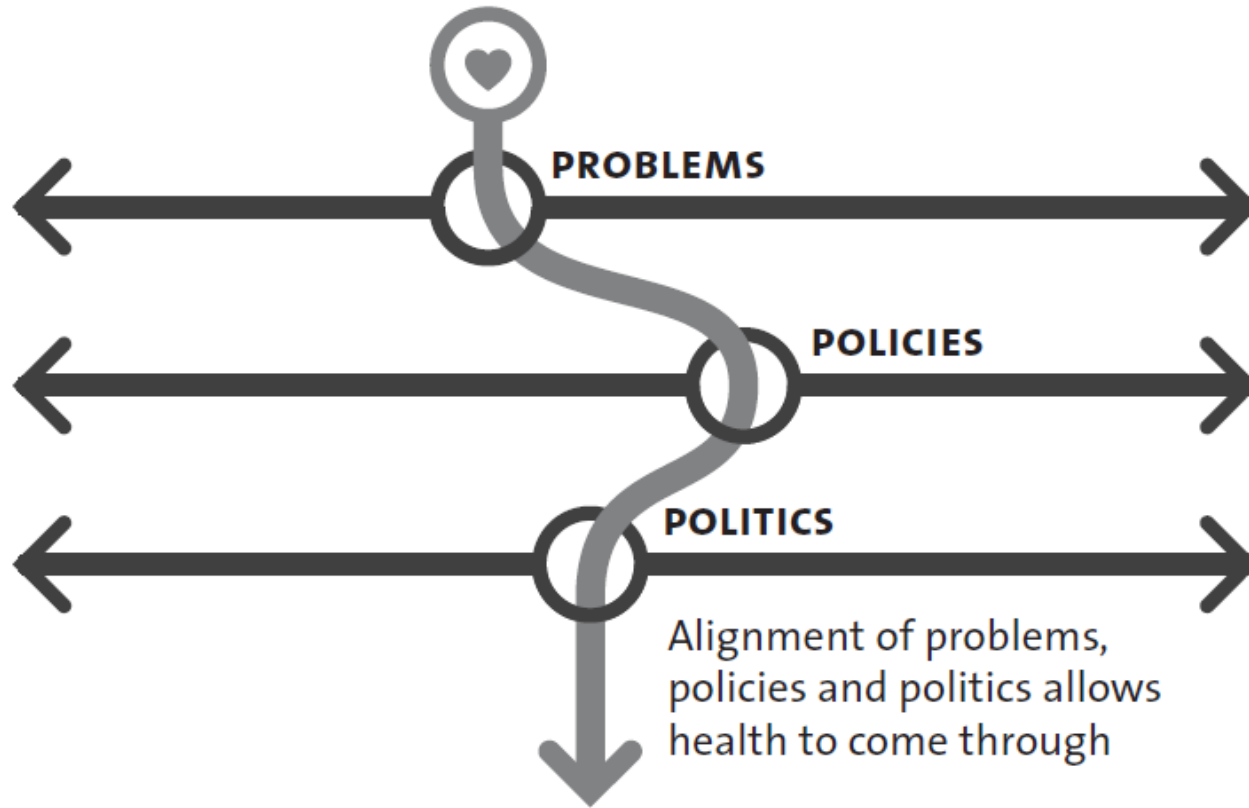

Building relationships and alliances for health outcomes and addressing health determinants

Creating opportunities for **mutual gain**

Policy window

Equity

Systematic differences in health that are avoidable or remedial and unfair

Health in All Policies workshop: the case of air pollution, urban health, and sustainability
18-20 June 2018, Washington DC

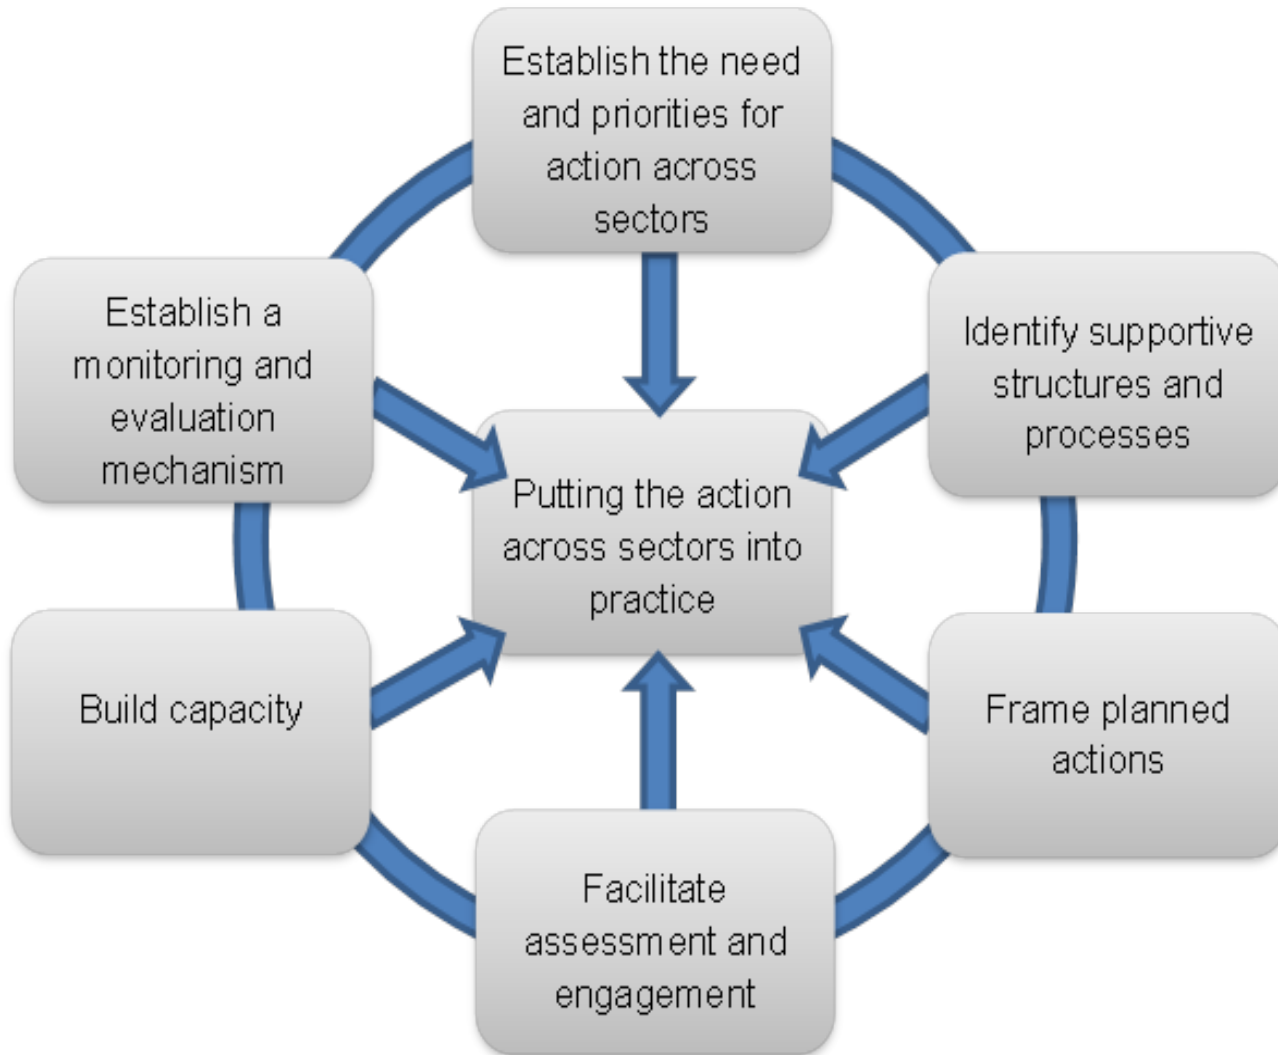

Governance.. (and..for HiAP)

1. collaboration
2. citizen engagement
3. a mix of regulation and persuasion
4. independent agencies and expert bodies
5. adaptive policies, resilient structures and foresight

“Smart governance for health” – Kickbush, EURO
2014

HiAP

- systematically takes into account the health implications of decisions
- seeks synergies
- avoids harmful health impacts
